**DETAILED ACTION**

***Election/Restrictions***

1. Claims 59-61 withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected method of use, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 7.

Applicant's election **with** traverse of Species A in Paper No. 6 is acknowledged. The applicant has falsely assumed that no extra search needs to be conducted for the additional species. The additional species have extra limitations, which require more consideration and search. Hence the rejection is proper and is retained.

Closer examination of the claims the examiner will not examiner claim 17, 24, 30-31 because they read on figure 2 as described in the specification. Claims 28, 37 will also not be examined due to the description given in the specification on page 16 they are related to another embodiment.

***Information Disclosure Statement***

2. The information disclosure statement filed 5-30-2002 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each U.S. and foreign patent; each publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

***Claim Rejections - 35 USC § 102***

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the

applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-3, 5, 9-11, 13-16, 18, 25-27, 29, 32-33, 35, 38, 42-52, are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent Pub No. US 2001/0044731 A1 to Coffman et al.

Coffman teaches a medial transaction carrier (medical devise) in communication with caregiver, patient and mediation via bar code labels or tags. The communications between the various components of the system using wireless technology, compunction within the wireless network may utilize radio frequency electromagnetic radiation, infrared radiation or other means for accomplishing wireless communication between network elements. Coffman's invention provides for closing the loop on drug delivery and validation that the right treatment has been given to the right patient. (Paragraphs 0019-0022 and 0027)

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claims 4,6-8, 12, 19-23, 34, 36, 39,40-41,53 rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent Pub No. US 2001/0044731 A1 to Coffman et al as applied to claims 1, 16, 29,50 above, and further in view of US Patent No.6021392 to Lester et al.

As mentioned above Coffman teaches the invention except for a two dimensional bar code. Lester teaches a two dimensional bar code.

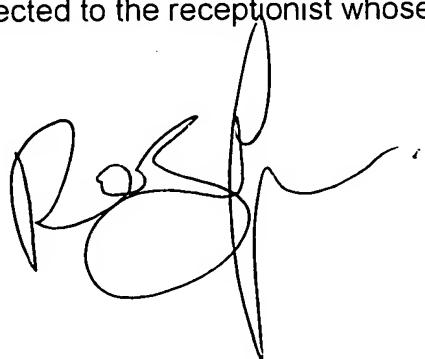

Therefore it would have been obvious to one having ordinary skill in the art at the time the invention was made for Coffman to have used a two dimensional bar code instead of a one dimensional bar code because according to Lester a two dimensional bar code is preferable because they contain more information in the same amount of space as one dimensional bar code.
